FREQUENCY CONVERTER

ShorPOWER® Ultra HP

150-200kVA

The ShorPOWER Ultra HP frequency converter utilizes state-of-the-art technology including the latest generation of power semiconductors and transformers controlled by an ultra-high speed digital system to create precisely regulated output power. This technology allows the converter

to be very compact and lightweight while being electrically powerful and highly efficient.

The Ultra HP will automatically connect to any marina power source worldwide and provide clean, stable and reliable power for the yacht. This is especially important due to ever increasing regulations regarding the use of onboard diesel engine generators while docked at a marina. Noise and air pollution caused by these generators, coupled by increased operational and maintenance costs, make the use of the ShorPOWER Ultra HP frequency converter a must.

Additionally, the ShorPOWER Ultra HP produces a highly regulated output regardless of fluctuations in the dockside power or changes in load onboard. This regulation protects the onboard electrical system by eliminating voltage spikes, surges, voltage drops or sags, and harmonic distortions typical of dock power.

The Ultra HP is designed to be the most reliable converter on the market by manufacturing the converter using only the highest quality components and by engineering the converter for actual marine use, such as operating continually at 100% load in high ambient temperatures.

The Ultra HP is available in output power ratings of 150 to 200kVA. (Consult factory for details.)
